SOLUTIONS FOR

Meeting the needs of professionals in numerous industries and applications, Extech continues to build brand loyalty and trust among electrical contractors, industrial mechanics, facilities maintenance, HVAC/R technicians, sustainability & safety directors, public works managers, building & restoration contractors, and more.

ELECTRICAL

When electricians and mechanics need test tools for their equipment installation, maintenance, and repair work, Extech meters and testers are up to the task. Use our tools to track down electrical faults and power quality problems, detect live wires before working on repairing cable lines, diagnose motors and controllers, and find emerging issues before damage occurs.

BUILDING & RESTORATION

Nurturing mold, rot, corrosion, and damage, moisture is a serious threat to structural integrity. Extech moisture & humidity meters monitor both ambient conditions and moisture levels in building materials. This information allows the restoration contractor to make an educated decision when to remove drying equipment. They provide accurate readings of moisture and humidity problems within the structure and help determine amount of water damage in the building. Other meters, such as multimeters and infrared thermometers, also help diagnose and repair key building equipment.

PROFESSIONALS

HVAC/R

When HVAC/R technicians need to work on electronic, mechanical, airflow, water, and refrigeration systems, they rely on Extech. Use our versatile tools – airflow meters, thermocouples, IR thermometers, temperature dataloggers, humidity meters, multifunction multimeters and clamp meters, and video borescopes – to perform HVAC/R installations and repairs.

SAFETY & HEALTH

When sustainability and health become mission-critical, Extech is there with the equipment that helps managers optimize environmental conditions for safety, comfort and savings. Use our products to detect unsafe conditions, monitor indoor air quality for levels of ${\rm CO/CO_2}$ levels, locate air distribution imbalances, test water quality, and measure indoor and outdoor sound and light levels.

FACILITY MAINTENANCE

When plant technicians need to keep their facilities running smoothly, Extech is there with the tools they need. Use our meters to trace intermittent electrical glitches, overhaul bearings, pumps and compressors, perform predictive vibration analysis, measure ambient and component temperature differentials, log indoor humidity levels, and help ensure overall productivity and safety.

Vane Versus Hot Wire

Which sensor type should you choose? For many technicians, it is ultimately a matter of preference but there are some distinguishing factors to keep in mind. Vane anemometers are very useful for fast, accurate measurements of air velocity. The ultra compact size of a hot wire anemometer probe makes it easy to access small openings such as louvered vents. Telescoping hot wire probes are also useful for reaching high locations.

AN300/AN310 Large Vane CFM/CMM Thermo-Anemometers

4" (10 cm) large vane allows for more precise readings on larger size ducts; choose models that also measure Air Volume and Humidity

- Fast responding sensors measure Air Velocity and Air Flow
- Built-in thermistor for air temperature
- Multipoint and timed average calculations
- Min/Max, Data Hold, and Auto Power Off
- Optional Air Flow Cone Kit (AN300-C) allows HVAC technicians to be freed from the hassle of calculating dimensions and allow for quick and easy airflow measurments for these common duct sizes; Adaptor size: Round 8.26" (210 mm) and Square 13.6" (346 mm)
- Complete with four AAA batteries and hard case

AN310 Additional Functions:

• Measures Relative Humidity and calculates Wet Bulb and Dew Point
